Functional Groups & Amino Acids

Organic Molecules & Functional Groups

The following simple molecules: water, ammonia, methane, formaldehyde and formic acid can be used as "lego-like" building blocks to construct the vast majority of organic and biological molecules. Simply replace a hydrogen from each of any two molecules with a bond to the central atom, and if joining three molecules replace 4 hydrogens with 2 bonds.

One molecule, one function: One Smell Receptor

Isoamyl acetate, also known as isopentyl acetate, is formed from isoamyl alcohol and acetic acid. It is a colorless liquid that is only slightly soluble in water, but very soluble in most organic solvents. Isoamyl acetate has a strong odor which is also described as similar to both banana and pear.[3] Banana oil may be either pure isoamyl acetate, or flavorings that are mixtures of isoamyl acetate, amyl acetate, and other flavors.

Isoamyl acetate

One molecule among 82 primary chemicals found in bananas:

Isoamyl acetate

These are just some of the 82 primary chemicals that make up a natural, delicious banana. Everything is chemistry. Discover what's inside our products at whatsinsidescjohnson.com.

QUESTION

Isoamyl acetate

The function in isoamyl acetate's structure is a(n):

- A. Alcohol
- B. Aldehyde
- C. Ketone
- D. Ester
- E. Carboxylic Acid

One molecule, two functions: One Smell Receptor

Methyl salicylate (oil of wintergreen or wintergreen oil) is naturally produced by many species of plants, particularly wintergreens. It is also synthetically produced, used as a fragrance, in foods and beverages, and in liniments.

Methyl salicylate

QUESTION

One of the functions, an ester, is circled. What is the other function?:

- A. Alcohol
- B. Ether
- C. Ketone
- D. Aldehyde
- E. Carboxylic Acid

One molecule, three functions: One Smell Receptor

An extract of the cured, full-grown, unripe fruit of an orchid produces a popular flavoring. The natural extract sells for ~ \$1500/kg versus ~ \$20/kg for the synthetic version. The structure of the compound that is responsible for the smell/flavor is shown to the right. The Guinness Book of World Records once listed this compound as having the lowest smell detection limit of all chemicals (2×10^{-11} g per 1,000 cm³ of air).

Vanillin

Bonus:

The space (volume) of the Oakland Coliseum Arena, aka Oracle Arena, is approximately 90,000,000 ft³. If 1.00g of the compound were released at center court, and was completely and evenly dispersed throughout the building, would you smell it sitting in sec. 204, row H, seat 121? Show your calculation. (1 ft³ = 0.0283 m³)

QUESTION

Vanillin

One of the functions, an alcohol, is circled.

What are the other two functions?:

- A. Aldehyde + Ketone
- B. Carboxylic Acid + Ester
- C. Ketone + Ether
- D. Aldehyde + Ether
- E. Carboxylic Acid + Aldehyde
