Chemistry Connections (CHEM 108)

- **STE(A)M \rightleftharpoons Chemistry \rightleftharpoons Allied Careers**
 - Linked by the Scientific Method

Chemistry focuses on the study of

- Energy & Matter:
Classification, Behavior & Properties

All Science, Technology, Arts & Engineering involves:

- Observations & Measurements:
(Qualitative & Quantitative)
- Applying metric & related units

Chemistry \rightleftharpoons Physics \rightleftharpoons Engineering

The Scientific Method (A Unifying Practice)

- **Energy & Matter: central in all three areas**
eg. Forces & Gravity
- **Observations: Visible & Measureable**
- **Mathematics: Calculations & Models**

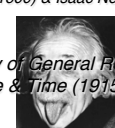

Progressions & Connections:
Arithmetic \rightleftharpoons Algebra \rightleftharpoons Calculus \rightleftharpoons Differential Equations \rightleftharpoons Partial Differential Equations \rightleftharpoons Linear Algebra \rightleftharpoons Non-linear Equations \rightleftharpoons Non-deterministic Systems

RESULTS: Protocols, Explanations, Predictions & Products
Examples: GPS, Cosmology, Space Travel, Space Probes,
New Materials: Structural, Mechanical, Industrial & Molecular

Law or Theory of Gravity?

Hipparchus and Eratosthenes (~ 270 B.C.E.)
Galileo (~1600) & Isaac Newton (1687)

Theory of General Relativity: Space & Time (1915-2015)

The key idea of Einstein's theory of general relativity is that gravity is not an ordinary force, but rather a property of space-time geometry.

Law(s)? vs. Theory

Spinoza Prize €2.5 x 10⁶

"The NWO Spinoza Prize is the highest Dutch award in science; that is awarded to Dutch researchers who rank among the absolute top of science."

QUESTION

Theories are best validated, proven or disproven by

- A. observations.
- B. models.
- C. laws.
- D. experiments.
- E. guesses.

QUESTION

The difference between a scientific law and a scientific theory can, at times, be confusing. For example, we will refer to the “Atomic theory” or perhaps the “Law of Gravity.” Should the Law of Gravity be changed to the Theory of Gravity?

- A. Yes, no one can see gravity, it is better described as a theory.
- B. No, scientific laws are based on summaries of many observations and gravity observations are well known and predictable. More than one theory may explain the observations.
- C. Yes, gravity is better described as a theory because gravity explains why masses attract each other and theories are about explaining observations.
- D. No, keep it as a law, laws offer explanations and gravity explains why masses attract each other and laws are about explaining observations.

Some Possible Steps in the Scientific Method

1. **Observations**
 - qualitative (general, descriptive, subjective)
 - quantitative (numbers, values)
2. **Formulating hypotheses**
 - possible explanation(s) for the observation(s)
3. **Performing experiments**
 - gathering new information
 - testing whether the hypotheses are valid
4. **Developing a theory**
5. **Testing & Refining**

QUESTION

Which statement most resembles a scientific theory?

- A. When the pressure of a sample of oxygen gas is increased 10%, the volume of the gas decreases by 10%.
- B. The volume of an ideal gas doubles when the pressure of the gas is reduced by one half.
- C. Gases are composed of very small particles that are constantly moving. They collide with the surface of containers which hold them, producing pressure.
- D. A gas sample has a mass of 15.8 grams and a volume of 10.5 Liters.

Energy & Matter

$$E = mc^2$$

<http://energy.gov/articles/livestream-our-latest-nobel-prize-winner>

Based on the standard model of cosmology, the total mass/energy of the universe is comprised of 4.9% ordinary matter, 26.8% dark matter and 68.3% dark energy.^{[1][2]} Thus, dark matter is estimated to constitute 84.5% of the total matter in the universe and 26.8% of the total content of the universe.^[3]

Dark matter is matter that is undetectable by emitted or absorbed radiation, but whose presence can be inferred from gravitational effects.

Properties of the Universe

QUESTION

The multiple components that compose our universe

Current composition (as the fractions evolve with time)

The estimated total mass of observable ordinary atomic matter in the universe is 10^{53} kg. Based on this estimate, the amount of dark matter is:

- A. 25×10^{53} kg
- B. 10^{265} kg
- C. 5×10^{53} kg
- D. 1×10^{53} kg
- E. 30×10^{53} kg

Percent

A comparison based on normalization to 100.

In mathematics, a percentage is a number or ratio expressed as a fraction of 100. It is denoted by the percent sign, %, and is a dimensionless (pure) number.

- George Washington University:
- 64 unsealed addressed envelopes with \$10 in each were dropped on campus in two different classrooms.
- In economics 18 of 32 were mailed back, in [business, history and psychology] 10 of 32 were mailed. (WSJ)

QUESTION

George Washington University:
64 unsealed addressed envelopes with \$10 in each were dropped on campus in two different classrooms.

• In economics (econ) 18 of 32 were mailed back, in [business, history and psychology (bhp)] 10 of 32 were mailed. What is the percent for each of the 2 groups of students?

- A. 28% econ 72% bhp
- B. 56% econ 44% bhp
- C. 56% econ 31% bhp
- D. 79% econ 31% bhp
- E. 79% econ 44% bhp

QUESTION

Percent Continued

- 64 unsealed addressed envelopes with \$10 in each were dropped on campus in two different classrooms.
- The professor conducting the study received 43.75% of the original \$640 in the mail. How much did he receive?

- A. \$28.00
- B. \$43.75
- C. \$140.00
- D. \$280.00
- E. \$360.00

(WSJ)

QUESTION

Percent Continued

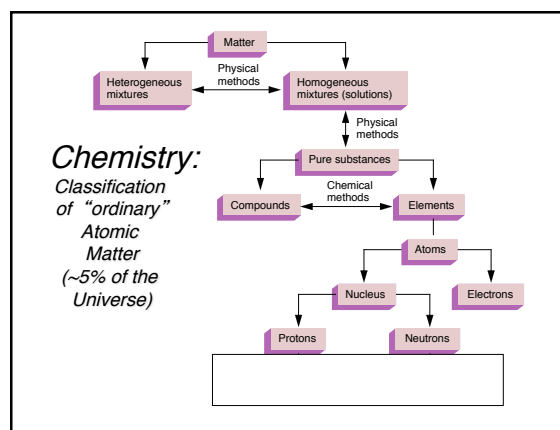

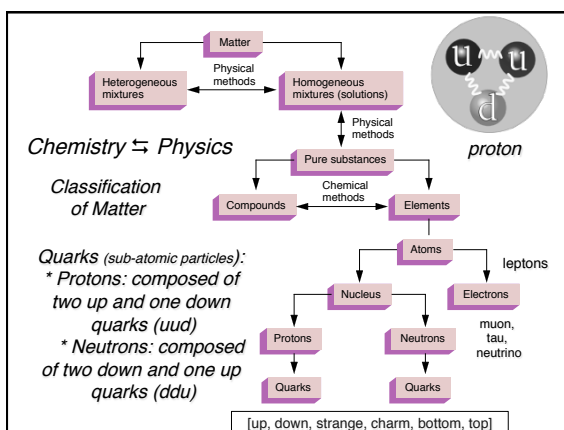

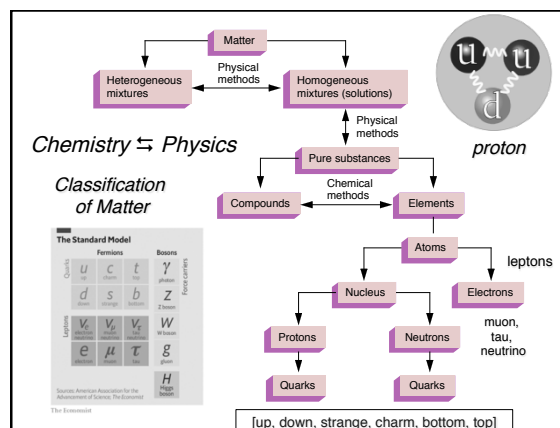

- Would you mail the envelop presuming no one knows you found it?
- One student mailed an empty envelop with the return address:
- Mr. IOU, 1013 Indebted Lane, Bankrupt City, MS

Did the professor count this envelope in the data?

- A. YES
B. NO

Be prepared to explain your answer.

(WSJ)

Atoms (CHEM 108)

- Atoms consist of 3 sub-atomic particles
 - # Protons = Atomic Number = Unique Name
 - # of Neutrons [different numbers = isotopes]
 - # of Electrons [different numbers = ions]

Periodic Table

Sub-atomic Particles

Protons ; Neutrons ; Electrons

Los Alamos National Laboratory Chemistry Division

Na = (Natrium) - Sodium

The periodic table shows the elements arranged by atomic number. Sodium (Na) is highlighted in the first column, second row. The table includes element symbols, names, and atomic numbers.

QUESTION

Which statement is incorrect for the three atoms in the following table.

Atom	# protons	# neutrons	# electrons
1	6	6	5
2	6	7	6
3	6	8	7

- A. Atoms 1, 2, and 3 have the same name.
- B. Atoms 1, 2, and 3 are isotopes.
- C. Atoms 1, 2, and 3 are ions.
- D. Atoms 1, 2, and 3 are not identical.

General Features of the Atom

Anders Jöns Ångström
(1814-1874)
 $1 \text{ Å} = 10 \text{ picometers} = 0.1 \text{ nanometers} = 10^{-4} \text{ microns} = 10^{-8} \text{ centimeters}$

CHEMISTRY of the Atom

FUNDAMENTAL PARTICLES:

	Mass	Charge	Symbol
Nucleus:			
• PROTON	1 amu • $1.67 \times 10^{-27} \text{ kg}$	+1	H+, H, p
• NEUTRON	1 amu • $1.67 \times 10^{-27} \text{ kg}$	0	n
• ELECTRON	very small • ~2000 x smaller than a proton or neutron	-1	e ⁻

The particle is said to "hold" or "bond" atoms together in molecules.

QUESTION

Which statement is correct for the three atoms in the following table.

Atom	# protons	# neutrons	# electrons
1	6	6	5
2	6	7	6
3	6	8	7

- A. Atoms 1, 2, and 3 have the same mass.
- B. Atoms 1, 2, and 3 have the same charge.
- C. Atoms 1 and 3 have the same charge.
- D. Atoms 1, and 3 have the same mass.
- E. Atoms 1, 2, and 3 have different masses and different net charges.

<http://science.kqed.org/quest/video/the-worlds-most-powerful-microscope/>

Can we "see" individual atoms using a microscope?

With **TECHNOLOGY**: Yes, using atomic force microscopy (AFM) and a variety of instruments such as Scanning Transmission Electron Microscopes.

Imaging: acetylene on Pd(111) at 28 K
