Solutions

- Homogeneous solutions are comprised of solute(s), the substance(s) dissolved, [The lesser amount of the component(s) in the mixture], and
- solvent, the substance present in the largest amount.
- Solutions with less solute dissolved than is physically possible are referred to as "unsaturated". Those with a maximum amount of solute are "saturated".
- Occasionally there are extraordinary solutions that are "supersaturated" with more solute than normal.

Concentration and Temperature

A solution of 35g of potassium chloride in 100g H₂O @ 25°C is Saturated & Concentrated; @ 75°C it is Unsaturated but Concentrated.

What describes a solution of 25.0g NaCl in 0.100L of H₂O @ 10°C?

- A) Dilute
- B) Concentrated
- C) Saturated
- D) Unsaturated

QUESTION

What describes a solution of 100.0g sucrose in 0.100L of H₂O @ 10°C?

- A) Dilute
- B) Concentrated
- C) Saturated
- D) Unsaturated

QUESTION

DHMO, dihydromonoxide : "The Universal" Solvent

<http://www.dhmo.org>

Water : “The Universal” Solvent

The oil (nonpolar) and water (polar) mixture don't mix and are **immiscible**. If liquids form a homogeneous mixture, they are **miscible**.

Gene nonpolar oil ai

rd eg.

Water layer

QUESTION

An unknown substance dissolves readily in water but not in benzene (a nonpolar solvent). Molecules of what type are present in the substance?

- a) neither polar nor nonpolar
- b) polar
- c) either polar or nonpolar
- d) nonpolar
- e) none of these

An unknown substance dissolves readily in water but not in benzene (a nonpolar solvent). Molecules of what type are present in the substance?

- a) neither polar nor nonpolar
- b) polar
- c) either polar or nonpolar
- d) nonpolar
- e) none of these

Aqueous Reactions & Solutions

- Many reactions are done in a homogeneous liquid or gas phase which generally improves reaction rates.
- The prime medium for many inorganic reactions is water which serves as a solvent (the substance present in the larger amount), but does not react itself.
- The substance(s) dissolved in the solvent is (are) the solute(s). Together they comprise a solution. The reactants would be the solutes.
- Reaction solutions typically have less solute dissolved than is possible and are "unsaturated".

- ✿ Many reactions are done in a homogeneous liquid or gas phase which generally improves reaction rates.
- ✿ The prime medium for many inorganic reactions is water which serves as a solvent (the substance present in the larger amount), but does not react itself.

Water dissolving an ionic solid

Dissolution of
NaCl in Water

Dissolution of NaCl in Water

Solution Concentrations

- ☆ A solution's concentration is the measure of the amount of solute dissolved.
- ☆ Concentration is expressed in several ways. One way is mass percent.

$$\text{Mass \%} = \text{Mass solute} / [\text{Mass solute} + \text{Mass solvent}] \times 100$$

- ☆ What is the mass % of 65.0 g of glucose dissolved in 135 g of water?

$$\begin{aligned}\text{Mass \%} &= 65.0 \text{ g} / [65.0 + 135] \text{g} \times 100 \\ &= 32.5 \%\end{aligned}$$

- ❖ A solution's concentration is the measure of the amount of solute dissolved.
- ❖ Concentration is expressed in several ways. One way is mass percent.

$$\text{Mass \%} = \text{Mass solute} / [\text{Mass solute} + \text{Mass solvent}] \times 100$$

- ✦ What is the mass % of 65.0 g of glucose dissolved in 135 g of water?

$$\text{Mass \%} = 65.0 \text{ g} / [65.0 + 135] \text{ g} \times 100$$
$$= 32.5 \%$$

Solution Concentration

- Concentration is expressed more importantly as molarity (**M**).
- Molarity (M) = Moles solute / Liter (Solution)**

- An important relationship is **$M \times V_{\text{solution}} = \text{mol}$**
- This relationship can be used directly in mass calculations of chemical reactions.
- What is the molarity of a solution of 1.00 g KCl in 75.0 mL of solution?

$$M_{\text{KCl}} = [1.00 \text{ g KCl} / 75.0 \text{ mL}] [1 \text{ mol KCl} / 74.55 \text{ g KCl}] [1000 \text{ mL} / \text{L}]$$

$$= 0.18 \text{ mol KCl} / \text{L}$$

QUESTION

20.0-g of HF [MM = 20.0 g/mol] was dissolved in water to give 2.0×10^2 mL of HF(aq), a weak acid solution. The concentration of the solution is:

- 1.0 M
- 3.0 M
- 0.10 M
- 5.0 M
- 10.0 M

Solution Concentrations: Solute vs. Ion Concentrations

HCl
1.0M 100% Ionized

$$[H^+] = [Cl^-] = 1.0M$$

Acetic Acid ($HC_2H_3O_2$) < 100% Ionized

$$[H^+] = [C_2H_3O_2^-] < 1.0M$$

Seven Solutions Post Lab Questions

QUESTION

Solutions: molarity & volume \rightarrow mass

How many grams of NaCl are contained in 350. mL of a 0.250 M solution of sodium chloride?

- 41.7 g
- 5.11 g
- 14.6 g
- 87.5 g
- None of these

Preparation of Solutions

Solution Formation
from a Solid

Preparing a Standard Solution

QUESTION

A 51.24-g sample of $\text{Ba}(\text{OH})_2$ [$\text{MM} = 171.3 \text{ g/mol}$] is dissolved in enough water to make 1.20 liters of solution. What is the molarity of the solution?

- a) 0.300 M
- b) 3.33 M
- c) 0.278 M
- d) $2.49 \times 10^{-1} \text{ mol/L}$
- e) 42.7 g/mL

A 51.24-g sample of $\text{Ba}(\text{OH})_2$ [MM= 171.3 g/mol] is dissolved in enough water to make 1.20 liters of solution. What is the molarity of the solution?

- a) 0.300 M
b) 3.33 M
c) 0.278 M
d) 2.49×10^{-1} mol/L
e) 42.7 g/mL

Solution Concentration

- ✧ The following formula can be used in dilution calculations:
$$M_1V_1 = M_2V_2$$
- ✧ A concentrated stock solution is much easier to prepare and then dilute rather than preparing a dilute solution directly. Concentrated sulfuric acid is 18.0M. What volume would be needed to prepare 250 mL of a 1.50M solution?
- ✧ $V_1 = M_2V_2 / M_1$
- ✧ $V_1 = 1.50 \text{ M} \times 250. \text{ mL} / 18.0 \text{ M}$
- ✧ $V_1 = 20.8 \text{ mL}$

✱ The following formula can be used in dilution calculations:

$$M_1V_1 = M_2V_2$$

• A concentrated stock solution is much easier to prepare and then dilute rather than preparing a dilute solution directly. Concentrated sulfuric acid is 18.0M. What volume would be needed to prepare 250.mL of a 1.50M solution?

☆ $V_1 = M_2 V_2 / M_1$

$$\star V_1 = 1.50 \text{ M} \times 250. \text{ mL} / 18.0 \text{ M}$$

✱ $V_1 = 20.8 \text{ mL}$

QUESTION

What volume of 18.0 M sulfuric acid must be used to prepare 15.5 L of 0.195 M H_2SO_4 ?

- A) 168 mL
- B) 0.336 L
- C) 92.3 mL
- D) 226 mL
- E) None of these

What volume of 18.0 M sulfuric acid must be used to prepare 15.5 L of 0.195 M H_2SO_4 ?

- A) 168 mL
B) 0.336 L
C) 92.3 mL
D) 226 mL
E) None of these

Will all molecules with the same molecular formula taste hot?

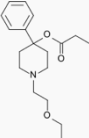

Capsaicin: $C_{18}H_{27}NO_3$

http://en.wikipedia.org/wiki/Scoville_scale

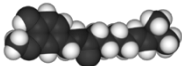

Molecular Applications

Capsaicin / Prosidol

Will all molecules with the same molecular formula taste hot?

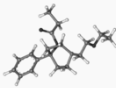

Chemical structure of Capsaicin: CCCC(=O)N1CC[C@H](C1)C2=CC=CC=C2COCC

Ball-and-stick model of Capsaicin, showing carbon (grey), hydrogen (white), oxygen (red), and nitrogen (blue) atoms.

Capsaicin: $C_{18}H_{27}NO_3$

Chemical structure of Prosidol: CCCC(=O)N1CC[C@H](C1)C2=CC=CC=C2C(=O)OC3=CC=CC=C3

Prosidol: $C_{18}H_{27}NO_3$ (opiate analgesic)

Will all molecules with the same molecular formula taste hot?

Capsaicin: $C_{18}H_{27}NO_3$

Prosidol: $C_{18}H_{27}NO_3$ (opiate analgesic)

QUESTION

What happens to the number of moles of $C_{12}H_{22}O_{11}$ (sucrose) when 100.0 mL of a 0.20 M solution is diluted to a final concentration of 0.10 M?

- A) The number of moles of $C_{12}H_{22}O_{11}$ decreases.
- B) The number of moles of $C_{12}H_{22}O_{11}$ increases.
- C) The number of moles of $C_{12}H_{22}O_{11}$ does not change.
- D) There is insufficient information to answer the question.

(Chem 120 Prep)

Solution Applications

A solution of barium chloride was prepared by dissolving 26.0287 g in water to make 500.00 mL of solution. What is the concentration of the barium chloride solution? $M_{BaCl_2} = ?$

$$M_{BaCl_2} = \frac{26.0287 \text{ g}}{500.00 \text{ mL}} \left[\frac{1 \text{ mol } BaCl_2}{208.23 \text{ g}} \right] \left[\frac{1000 \text{ mL}}{1 \text{ L}} \right]$$

$$= 0.25000 \text{ mol/L}$$

Solution Applications

10.00 mL of this solution was diluted to make exactly 250.00 mL of solution which was then used to react with a solution of potassium sulfate. What is the concentration of the diluted solution. $M_2 = ?$

$$M_{BaCl_2} = M_1$$

$$M_2 = M_1 V_1 / V_2$$

$$M_2 = 0.25000 \text{ M} \times 10.00 \text{ mL} / 250.00 \text{ mL}$$

$$M_2 = 0.010000 \text{ M}$$

QUESTION

A 51.24-g sample of $Ba(OH)_2$ is dissolved in enough water to make 1.20 liters of solution. How many mL of this solution must be diluted with water in order to make 1.00 liter of 0.100 molar $Ba(OH)_2$?

- a) 400. mL
- b) 333 mL
- c) 278 mL
- d) 1.20×10^3 mL
- e) 285 mL

Answer

A 51.24-g sample of $Ba(OH)_2$ is dissolved in enough water to make 1.20 liters of solution. How many mL of this solution must be diluted with water in order to make 1.00 liter of 0.100 molar $Ba(OH)_2$?

- a) 400. mL, $V_1 = M_2 V_2 / M_1$
- b) 333 mL
- c) 278 mL
- d) 1.20×10^3 mL
- e) 285 mL

Solution Applications

20.00 mL of a $M_2 = 0.010000 \text{ M}$ barium chloride solution required 15.50 mL of the potassium sulfate solution to react completely. $M_{K_2SO_4} = ?$

$$M_{K_2SO_4} = [M_{BaCl_2} \times V_{BaCl_2} / V_{K_2SO_4}] \left[\frac{1 \text{ mol } K_2SO_4}{1 \text{ mol } BaCl_2} \right]$$

$$M_{K_2SO_4} = \frac{0.010000 \text{ mol } BaCl_2 \times 0.02000 \text{ L } BaCl_2 \times 1 \text{ mol } K_2SO_4}{0.01550 \text{ L } K_2SO_4 \times 1 \text{ mol } BaCl_2}$$

$$M_{K_2SO_4} = 0.01290 \text{ mol } K_2SO_4 / L_{K_2SO_4} = 0.01290 \text{ M } K_2SO_4$$

Solution Applications

How many grams of potassium chloride are produced?

$$\begin{aligned} ? \text{ g}_{\text{KCl}} &= 0.010000 \text{ mol}_{\text{BaCl}_2} / \text{L}_{\text{BaCl}_2} \times 0.02000 \text{ L}_{\text{BaCl}_2} \times 2 \text{ mol}_{\text{KCl}} / 1 \text{ mol}_{\text{BaCl}_2} \times \\ &\quad 74.55 \text{ g}_{\text{KCl}} / \text{mol}_{\text{KCl}} \\ &= 0.02982 \text{ g}_{\text{KCl}} \end{aligned}$$

Solution Applications

If 20.00 mL of a 0.10 M solution of barium chloride was reacted with 15.00 mL of a 0.20 M solution of potassium sulfate, what would be the theoretical yield of barium sulfate?

$\begin{aligned} \text{mol}_{\text{BaCl}_2} &= M_{\text{BaCl}_2} \times V_{\text{BaCl}_2} \\ &= 0.10 \text{ mol}_{\text{BaCl}_2} / \text{L}_{\text{BaCl}_2} \times 0.02000 \text{ L}_{\text{BaCl}_2} \\ &= 2.0 \times 10^{-3} \end{aligned}$	$\begin{aligned} \text{mol}_{\text{K}_2\text{SO}_4} &= M_{\text{K}_2\text{SO}_4} \times V_{\text{K}_2\text{SO}_4} \\ &= 0.20 \text{ mol}_{\text{K}_2\text{SO}_4} / \text{L}_{\text{K}_2\text{SO}_4} \times 0.01500 \text{ L}_{\text{K}_2\text{SO}_4} \\ &= 3.0 \times 10^{-3} \end{aligned}$
$2.0 \times 10^{-3} < 3.0 \times 10^{-3}$ <p>$2.0 \times 10^{-3} \text{ mol}$ is limiting</p>	

Solution Applications

If 20.00 mL of a 0.10 M solution of barium chloride was reacted with 15.00 mL of a 0.20 M solution of potassium sulfate, what would be the theoretical yield of barium sulfate?

Must use the limiting reagent:

$$\begin{aligned} &= \frac{0.10 \text{ mol}_{\text{BaCl}_2}}{\text{L}_{\text{BaCl}_2}} \times 0.02000 \text{ L}_{\text{BaCl}_2} \times 1 \text{ mol}_{\text{BaSO}_4} \times \frac{233.39 \text{ g}_{\text{BaSO}_4}}{\text{mol}_{\text{BaSO}_4}} \\ &= 0.47 \text{ g} \end{aligned}$$

QUESTION

What mass of NaOH is required to react exactly with 25.0 mL of 1.2 M H_2SO_4 ?

- A) 1.2 g
- B) 1.8 g
- C) 2.4 g
- D) 3.5 g
- E) None of these

ANSWER

- C) 2.4 g

Remember that the reaction is $2\text{NaOH} + \text{H}_2\text{SO}_4 \rightarrow \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$, so there are two moles of NaOH used per one mole of H_2SO_4 .
