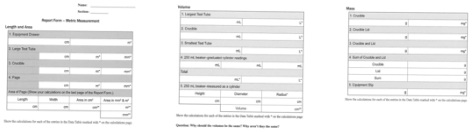
Chem 108: Lab

Sign in: Roster @ front of lab

Pick up replacement page for today's experiment.

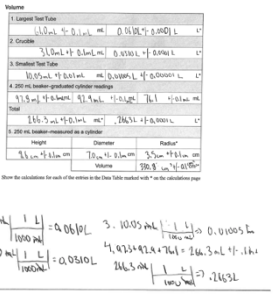
Last Week's Experiment #1
Metric Measurement
Completed individual forms pp. 12-15 due today by the end of lab.

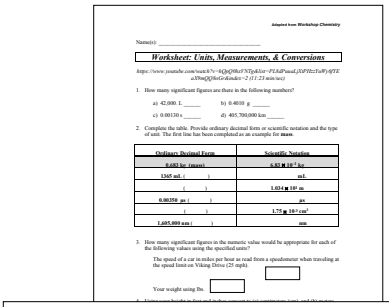


Include calculations. Staple together with partner's form and turn in before the end of lab.
Most legible report pages on top.

Metric Measurement: Experiment #1

Example of an acceptable set of student data, conversions, and calculations. DO NOT COPY. ***Use as a guide.***



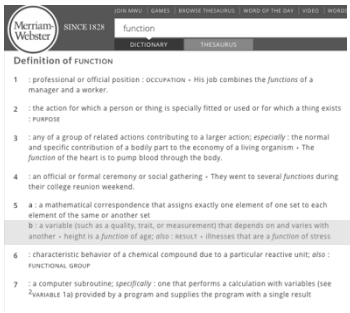


Worksheet (Handout): Due 20-Feb. Collaboration is encouraged. Turn in one with the names of all contributors.
http://chemconnections.org/general/chem108/Math%20%26%20Measurements-WKS.f18.pdf

CHEM 108

Experiment #2:
Measuring Density

Comparison of Relative Properties
FUNCTIONS



Density is a function of an object's mass and volume.

Comparisons of Relative Properties

FUNCTIONS

density : mass : volume

Functions & variables can be described interchangeably between:

1) Images (Symbols)
2) Words
3) Sounds (Voice)
4) Numbers
5) Tables
6) Graphs
7) Formulas

Density

Mass Volume

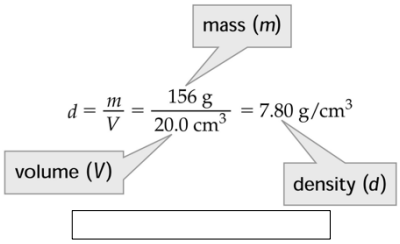
Density is a function of an object's mass and volume.

Density

Formulas

http://www.density.com/what.htm

Density = Mass / Volume [g/mL or g/cm^3; g/L]



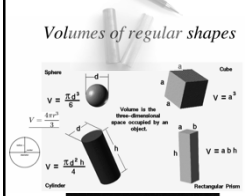
Experiment #2 Measuring Density

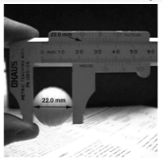
➢ **Do Today**

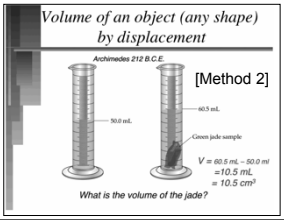
- ***Goal:*** To measure diameter and height of a metal cylinder and calculate the respective volume.
  - To plot mass versus volume and determine slope of "trendline(s)".
  - Using 2 different methods, to measure mass and volume of a liquid, and to determine which method results in *higher–precision* (*most decimal places*)
  - To measure mass and volume of a solid using instruments of different precision, and determine which method results in *highest–precision*
- ***Work with same lab partner(s) as the Metric Measurement Experiment***
  - Be sure to write yours and partners' names **ON both REPORT FORMS DUE Week #5**

➢ **Do Today**

Chem 108 Lab: Experiment #2

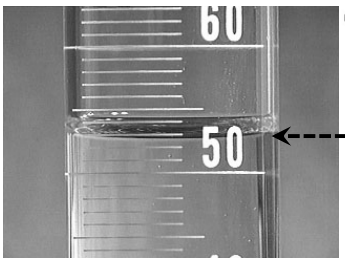


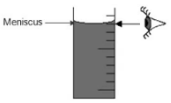




Reminder:

Measuring with a 100 mL Graduated Cylinder:



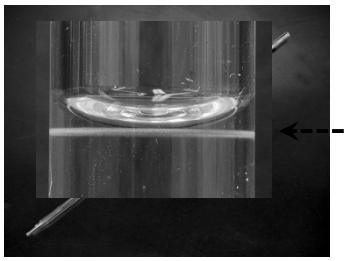


meniscus

Measure bottom of the meniscus at eye level

52.9 mL

➢ Measurement using a volumetric pipet:

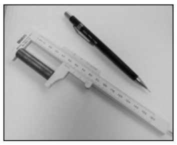


meniscus

- ***Bottom of the meniscus MUST be at calibration line for accurate measurement***

➢ Add a column to pg. 22 & label both of them

Each partner to measure with both Caliper and Ruler & compare



Method 3–Measuring Volume with Calipers

	Caliper	Ruler
Mass, metal		
Height, metal		
Diameter, metal		
Radius, metal*		
Volume, metal*		
Density, metal*		

Densities of the Unknowns:

Part A– Average Density of Unknown Liquid from the two methods:

Density of Liquid (Graduated Cylinder)	
Density of Liquid (Volumetric Pipet)	
Average Density of Unknown Liquid*	

Part B– Average Density of Unknown Metal from all three methods:

Density of Metal (Graduated Cylinder)	
Density of Metal (Ungraduated Vial)	
Density of Metal (Ruler/Calipers)	
Average Density of Unknown Metal*	

Show the calculations for each of the entries in the Data Table marked with * on the calculations page.

➢ Replace Part C, pg. 19 with handout

http://chemconnections.org/general/chem108/Measuring%20Density-graphing.2017.pdf

Measuring Density (REPLACEMENT for Part-C page 19)

Part C-Mass Versus Volume

Select either Data Set for Metal A or Data Set for Metal B below to plot. You will do one and your partner will do the other Data Set.

Metal A

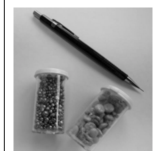
Volume (cm3)	Mass (g)
7.89	17.22
6.80	18.11
7.92	21.21
9.75	22.26
8.17	23.19
9.84	25.44
10.1	26.36
11.4	28.29
11.8	28.73
11.7	29.69

Metal B

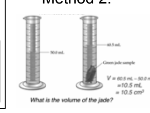
Volume (cm3)	Mass (g)
6.63	53.90
6.45	54.53
6.42	57.15
6.61	57.34
7.97	69.15
8.40	69.43
7.98	72.24
9.65	84.84
9.65	86.14
9.84	87.67

1. Calculate the respective densities for the metals using an average of the Mass and Volume for each metal. (Report the values in the table on this page and attach it along with your graphs to the REPORT FORM pages and turn in.)
2. Graph the Mass (vertical axis) vs. Volume (horizontal axis) for your Data Set (graph paper is in Appendix C). Scale your graph to use as much of the graph paper as possible. Provide a Title, label the axes (include units), show each data point and draw the best possible straight line balancing the differences in the distance of the points on each side of the line using a ruler. Draw the line through the y-axis. Calculate the slope of the line, slope (m) = Δy / Δx, which equals the metal's density. (Report the values below.)
3. The respective metals are either aluminum, density = 2.64 g/cm³ or copper, density = 8.94 g/cm³. Using these as accepted values, identify A and B, then calculate and record the calculated % error in the experimental densities using the two methods.

	A	B
Metal identified		
Density (g/cm³) *averaged*		
Error (%) *averaged*		
Density (g/cm³) *graphed*		
Error (%) *graphed*		

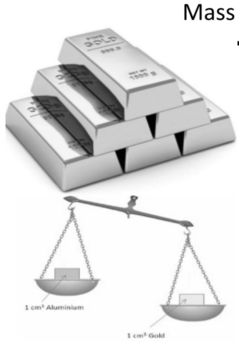


Method 2:

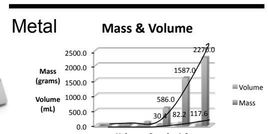


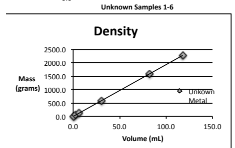
Density
Mass & Volume

Numbers
Tables
Graphs



Metal





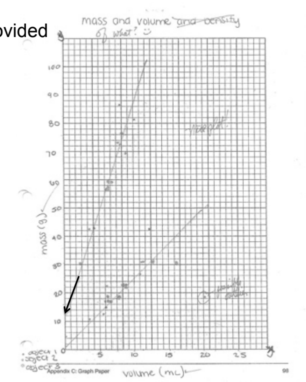
ables, & Graphs

- ➢ Plot data using blank graph paper in back of Lab Manual pp. 119 – 121

Data & instructions are provided on handout

http:// chemconnections.org/general/chem108/Measuring Density-graphing.2017.pdf

- ➢ Plot all data for either Metal A (one partner) or Metal B (other partner): Can be on the same graph paper or separate. If on the same paper be sure to consult with partner on the scales to use.
- ➢ *Complete the bottom table of handout and attach to the Report Form to turn in.*



6

Equation of a line: Δy = mΔx + b

y = y axis   m = slope   x = x axis   b = y-intercept

We're plotting: Mass = y axis   Volume = x axis

- ➢ How are mass and volume related?

$$\frac{\Delta\, mass}{\Delta\, Volume} = density$$

We can rearrange this as: $mass = density(Volume)$

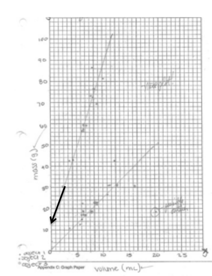
If we compare to equation of a line:

$$mass = density(Volume) + 0$$

Δ y = m Δ x + b

Now, what does the slope of our trendline represent?

- ➢ Plotting data
  - ➢ A good plot should have:
    - ➢ An appropriate scale
    - ➢ Labeled axes (with units)
    - ➢ An appropriate title



- ➢ *Use a ruler to estimate best-fit line for data that appears to group together (It is NOT connect-the-dots)*

18

Different Volumetric Tools

Both = +/- 0.01 mL

+/- 0.01 mL

A B C D

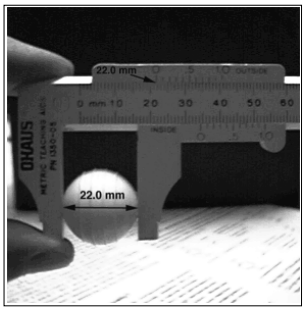
True (A) / False (B)

A and D have the same level of precision.

The following is the correct order of increasing precision: D < C < B.

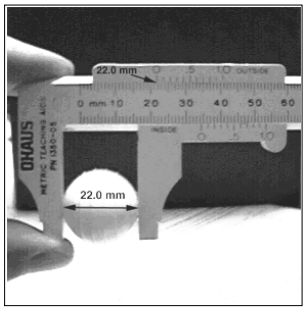
- Complete both columns pg. 22

Each partner to measure with both Caliper and Ruler & compare

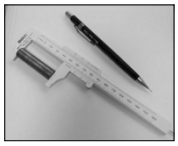


Using a Caliper

Come up with partner having names on both lab forms.
You & partner will be provided unknown liquid & unknown metals, caliper & ruler.



Measuring the cylinder



Read instructions carefully & discuss with partner before beginning.

Return empty liquid vials & metal cylinders when finished.

Liquid is salt solution that can be poured down drain.

Experiment #2 –Measuring Density

Complete and record all measurements pp. 20-22 today. Omit pg. 23 and Trial 2 pg.20

Have **individual** forms initialed before leaving lab today.
Only your measurement data is due to be signed today.
Be certain of calculations, graphs & questions before leaving lab.

Next Week: (Week #4)

- Check Calendar; Monday is a holiday; Wednesday: Open Lab & Help Session
- Complete density calculations, graphs & Report Form pp.20-22, & pp. 24-25; attach completed replacement pg. 19 plus graphs (One complete set for each lab partner to be turned in; stapled together clearest report first.)
  DUE Week #5
- (GQ) On-line *Density & Buoyancy Guiding Questions* (individually done)
  https://phet.colorado.edu/sims/density-and-buoyancy/density_en.html
